

## Instructions for the When you go small go Bayes! Workshop

- You can work in R directly, however, RStudio offers a much better user interface.
- Please download and install R at: <https://www.r-project.org> based on your OS
- The latest R version is R 4.2.3 (release was on 3/15/2023)
- Please download and install RStudio. You need to install R first before installing RStudio.
- Like R, RStudio is also free and can be downloaded at:  
<https://rstudio.com/products/rstudio/download/#download>
- JAGS is Just Another Gibbs Sampler (also free). Please download this from  
<https://sourceforge.net/projects/mcmc-jags/>

We will not be programming directly in JAGS but use RStudio to call JAGS in the background and do our bidding.
